Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 3 the allowability in combination with the other claimed features is because nowhere in the prior art is there a laminated type electric double-layer condenser having the end portion of the electrode that is spaced, at the two axial end portions of the laminated type polarized electrode, at a distance of 0.1 % or more of the width of the electrode member from the end portion of the electrode member.

Regarding claim 6, the allowability in combination with the other claimed features is because nowhere in the prior art is there an electrical double layer condenser having an adhesive layer that has a width set larger by about 0.3 to 10 % than that of the electrode member. Regarding claims 12 and 14, the allowability in combination with the other claimed features is because nowhere in the prior art is there a process for manufacturing an electrode sheet for an electric double-layer condenser having the laminating step that is performed by adhering the sheet-shaped electrodes while applying the conductive adhesive with a thickness of 10 microns or less to the surfaces of the conductive foil by using a gravure coater.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation of Pertinent Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
